

1 in 30 Baby Boomers has HEP C

and most don't even know it!

WHAT IS HEP C?

Hepatitis C, or HEP C is a blood-borne disease that can cause liver damage, liver cancer, and even death. Those who have HEP C often have no symptoms for decades, until it is too late.

Even blood drops invisible to the naked eye can transmit disease for up to 3 weeks!

WHY SHOULD I GET TESTED?

- ⊗ People born 1945-1965 are 5X more likely to have HEP C
- ⊗ HEP C isn't part of routine bloodwork
- ⊗ About 3.5 million people in the US have HEP C, and half do not know.
- ⊗ Most importantly, it is CUREABLE!

Get tested today!

When: Saturday, Feb 10: 8:30 to 10 AM

Where: Erskine Lakes Firehouse (70 Mohawk Trail)
